masha \babko - get it to run. Options. 1st studio siberian mouse.. picture video sound dxg e-mail download dvd full ArkivJazz offers a great collection of jazz and classical music titles on CD, DVD, Vinyl and Blu-ray.Q: How do I save and load user defined variables in Python? Hi I have recently started programming python and have made some very basic programs that work however what I want to do is run python code outside the standard interpreter. My goal is to run these programs on my phone to be able to run it from anywhere in the house so I wouldn't need to ssh into my machine everytime I want to use it. I have been reading about people that want to run python code on a server from the command line using python3. They talked about using print() and docstring. However I can't figure out how to use those. I am making a program in which I have to get in the room and check a light on it so I can try and do tasks while I am in the room (A task is switching on or off a light). I want to be able to call the function from another script and run it whenever I want, but I keep getting errors with the print() and docstring. I need to get this to work so I can call the function on my phone if that makes sense. Please help. I am still a beginner to programming so my question may be dumb. # -\*- coding: utf-8

```
 -*- import socket import struct import sys def connet():  
    #s=socket.socket(socket.AF_INET, socket.SOCK_STREAM)  
s=socket.socket(socket.AF_INET, socket.SOCK_STREAM, socket.IPPROTO_TCP)  
s.connect(("192.168.1.119", 8888)) def getdata(s): # print(s.recv(1024))  
    data=s.recv(1024) s.close() return data def setdata(data): # print(data)  
    s.send(data) return "finished"
```
