Installing Adobe Photoshop is relatively easy and can be done in a few simple steps. First, go to Adobe's website and select the version of Photoshop that you want to install. Once you have the download, open the file and follow the on-screen instructions. Once the installation is complete, you need to crack Adobe Photoshop. To do this, you need to download a crack for the version of Photoshop that you want to use. After you have the crack, open the file and follow the instructions to apply the crack. After the crack is applied, you can start using Adobe Photoshop. Be sure to back up your files since cracking software can be risky. With these simple steps, you can install and crack Adobe Photoshop.

If your photos won't import into Photoshop Elements, here is what you can do: The only way to attach a digital photo to a Word or Excel document is via Adobe's *Ghosting*. You can align the photo with the text in the document. But if you are working with a collection of images, you have to create a new image where all the images will appear. In Photoshop, you go to File>New. Then you go to the "Window" menu and choose "Image". There is a "Change the appearance of the selected images" option in that group. You can align the photo with the text on the document or you can make it a book cover. I can recommend the book, "Photoshop: Elements Essentials" for more on how to use this feature. The *Quick Slideshow* function is nice but it does nothing at all when you click on it, except make the annoying screen darken. If you really need a slideshow, try *Adobe Media Encoder*, the free program that enables you to create a DVD (or save an MP4 file), for a slideshow. This feature works with Photoshop Elements and Photoshop, but I like the simplicity and clean UI of the Elements interface. You can apply the effect to a few photos or to hundreds. The time you spend browsing will be nothing compared to the time you spend drilling down into and addressing the feedback. For example, I can see the tiny yellow arrow pointing to a misspelling in the "What" field. I click on that keyword to see the appropriate "Editor's Suggestions" panel. Click the "Cross" icon next to "Editor's Suggestion" to dismiss it. I edit the word and save the file. My actual changes are listed in the left-hand side.
