AstroEyes 0.1.0 AstroEyes is an easy-to-use helper for windows to optimize your sleep cycle. When you are sleeping your brain generates a lot of static and your eyes get fatigued. That is why to be awake longer you have to have longer sleep. During the night the windows closses the brainwaves and the sleep awakes. Sleep time is then calculated from the total monitor time of the last night. AstroEyes can open your eyes to keep your brain active and you can make sure that your brain is not sleeping. Aristo (Final 2022)

========== Aristo is a simple and fast download manager written in c++. That can download almost any type of file. You can organize the file downloads according to your wants. You can set the download schedule or limit the upload speed. With Aristo you can take control of the downloads. Aristo Features: =============== - Scheduled downloads - Download any kind of file by selected the source from the list of available links - Keep track of your downloads thanks to the download log - Select the destination folder where to save your files - Auto unzip the downloaded files - Force the download speed - Auto pause the download - Configurable with the user interface - The user interface is fully configurable (icons size, colors,...) - Control the download log - Pause the download with a double click - Create the scheduled download with a double click - Control the global download speed with the mouse Aristo has been my primary downloader for years, and I can't imagine going back to a more complex program for downloading. Some basic negatives I see however: - I don't like that no download queue is used. It has often caused me to be stuck in a download where it is unable to "find" it. Furthermore, there is no explanation of why I am stuck in a download, or what can be done to cancel it. - I find it a bit odd that the user interface has only a few kinds of items; off the top of my head, these include: - Download - Unzip the files - Create a scheduled download I can find no way to change the text in any of the menus to fit the user's language, and I find it a bit strange that the tabs for the different settings are all in English. The download log is not very user friendly either. For example, it shows the name of the file in English, but I find it easier to read text with correct spelling and grammar. I find it strange that a program that stores information about your downloads, that is downloaded during the download, is saved to the same location as the files you download. Files are so often stored in different places or user-specific places. The fact that it requires me to install another program before I can use the program would really appeal to me, but then I remember how the App Store is so popular, so perhaps that is the way to
