Along with Civil 3D, it is one of two mainstream 3D-CAD applications currently available on the Windows platform. Autodesk's other popular 3D-CAD application, FreeCAD, was released in December 2018, and runs only on GNU/Linux and MacOS. Both are viewed as being at the high end of the spectrum and are used by large international corporations for complex design tasks such as multidiscipline design. AutoCAD History AutoCAD is one of the top ten highest grossing commercial software programs of all time. Its creator, John Walker, began AutoCAD in 1982 at Central Office Software, Inc., and it was first released to the public in December of that year. There were a few different early versions of AutoCAD, but the original 1982 version is the one most people are familiar with. The computer used in the original AutoCAD was the Motorola 68000, which had no real memory, and ran software stored on external magnetic disk drives. That led to version 1 of AutoCAD being a barebones application that one could use to draw simple lines and circles, but it had no intelligent features at all. The first version of AutoCAD ran at a very low resolution (200 dots per inch or dpi) on a screen that ran in black and white. It was used mainly to design labels for wind tunnel models. The next version was the first to have graphics mode. It ran on the Intel 8080 processor. The graphics mode was primitive, but it was the beginning of the evolution of AutoCAD. One can call this version 1.5. It was very slow at running on the 8080, however, and many users complained that they had difficulty drawing anything but rectangles and circles. AutoCAD Version 2 came in 1988 and was the first version to support vector graphics, which made it much more powerful than the previous version. The graphics mode was enhanced to be more powerful and easier to use, and the interface was simplified. The name was changed to AutoCAD 2.1, but the version number remained at 2. AutoCAD 2.2 was released in 1990. In 1994 AutoCAD 3.0 was released, and many more features were added, including a 2.5-inch hard disk drive, color, and animation. The name was changed to AutoCAD 3.0. It was the last major change to the name, and there were

My First Penobscot Lake Camping Trip This weekend I embarked on my first camping trip with my new son in a brand new 14 foot all purpose travel trailer. I was a bit nervous, but my fears were quickly dispelled when we started taking things out of the trailer. Within the first hour of taking things out of the trailer, I was greeted with an empty vehicle in which I could park the family's larger vehicle and secure my gear. When I consider all the factors and a whole lot of know-how, I am surprised I didn't make it more of a learning experience. The Big Story To begin with, I am a fairly seasoned camper and boater. I have owned a variety of used campers, trailers, and boats over the years. What I have learned about the all-purpose trailer is that it is a bit lighter, simpler, and more flexible than a traditional camper or boat. I expected to spend more time prepping and folding stuff, but it wasn't so. Prepping The first thing I did when we hit the campground was to swing into action. I went straight to the campground office and got a pass and then I started unloading all of my gear. My partner and I were pleased to find that our fold-flat stroller was a convenient port of entry to the boat and trailer. While I was getting the stroller in the boat, I was also packing up all of the stuff that was in the travel trailer. I put the two big comforters in the same spot where we always keep them. We both decided to keep the inside of the trailer as neat and clean as possible so we did away with the vast amount of stuff. Once we were out of the camper, I brought the family's larger vehicle in and then I parked the family's vehicle. I moved
