The AutoCAD 2020 launch Autodesk announced AutoCAD 2020 at its Inspire event in September 2018. The main features of the new AutoCAD include a fully revamped user interface that takes advantage of the new AutoCAD productivity features introduced in 2018, new capabilities for textured surfaces, and new features for drafting and creating 3D visualizations. New features AutoCAD 2020 is geared towards the new AutoCAD productivity features introduced in 2018. Among these, AutoCAD's product innovation (AutoCAD PI), was designed to reduce the need for the design operator to manually enter data and provide feedback about changes. Furthermore, the newly created 3D content can be used for graphics applications such as rendering, visualizations, and movies. AutoCAD's new feature for drafting and creating 3D visualizations is called 3D Cloud, and was introduced as a preview at the 2019 Show. This feature allows users to create 3D visualizations directly from 3D models in the cloud, such as a mobile app or other web apps. The new "Sketch" feature is a tool with which users can create freehand drawings. The new "Entourage" feature allows users to create multiple views of a single drawing, each with different colors and linetypes. History of the AutoCAD series AutoCAD history has a long and storied history. It was first released in December 1982. Since then, it has evolved with the introduction of new features and platforms. It has also been subject to an onslaught of competition from lower priced competitors. AutoCAD's history is covered in more detail in the AutoCAD 2020 section above. AutoCAD 2011 AutoCAD 2011 was released in September 2010. It was the first version of AutoCAD to be released for the Windows 7 operating system.
