SAP S/4HANA OpenSCAD is a free CAD software application, using OpenGL rendering and an object-oriented user interface. In the v13 version (2013-06-28), it gained a new very powerful file format called OpenSCAD-Lite. It is used to generate non-geometric meshes which are then translated to OBJ, OBJMTL, STL, or FBX format. The open-source file formats OpenSubdiv and OpenFOAM support the free CAD application Meshlab. The open-source CAD format Open CAD (OpenCAD) is a very basic geometry format like DXF, IES, dxf2iecad, Geomerit. It is based on the original dxf format but simplified. The file format specification can be found at the [OpenCAD Wiki](#). Autodesk Inventor, an Autodesk 3D CAD application, is also open source and features an online repository containing source code for parts and related files. The Z-Suite, an open-source and free modeling and BIM application, uses OpenGL for its native rendering.
