AutoCAD History AutoCAD can trace its roots back to 1968, when developer Ed Simms wrote the first CAD applications for the CP/M operating system on the 16-bit IBM PC/AT. Simms left Autodesk and formed Simms Engineering to develop the CP/M CAD applications. These first programs, including ProjectLAB, were written in Microsoft BASIC. The CP/M applications were not successful, and the company was purchased by Bentley Systems. The founders of Bentley Systems, Robert C. McAlister and Eugene Trahan, rewrote the applications using C and BASIC. The programs were called "drapes", and they were introduced in January, 1970. In the early 1970s, Bentley Systems decided to develop a CAD program, based on drapes, which would run on a microcomputer. Bentley's CAD was renamed AutoCAD. The first version of AutoCAD was released in 1982. According to the announcement of the AutoCAD press release, Autodesk is currently "a software company that produces software for 2D and 3D modeling, illustration, and drafting" and that it "is the world's leading provider of 2D and 3D design software for architects, engineers, and illustrators." The first version of AutoCAD was a CP/M application running on a PC/AT with a Motorola 68000 CPU running at 8 MHz. The new AutoCAD was released in 1982, and was immediately a commercial success. Within a few years, the size of AutoCAD was limited by the size of the screen on the PC/AT of the day. When new computers were introduced, AutoCAD would be released for the new platforms. The original 1982 version of AutoCAD was bundled with a set of drawing tools, including an x-y table, transverse lines, and circles, named the Engineering Workbench. A full copy of the AutoCAD source code is now available on the Internet Archive. Interface One of the first things you notice about AutoCAD is its mouse. The drawing area is a standard Microsoft Windows screen size, and AutoCAD presents itself as a standard Microsoft Windows window. You click and drag to draw, and you use the mouse to zoom, pan, and rotate. The biggest difference between the original AutoCAD and later versions is the appearance of a standard menu bar with drop down menus that

"While I don't believe in jailing women for having an abortion, I am pro-life," she said. "I will always defend the life of the unborn." "That is a pretty serious thing, especially when you talk about the life of the unborn," Jackson said. "We know that there is a life in the womb." Jackson said she is opposed to the current criminal penalties that make abortion a felony in Alabama and that she would like to see the state adopt a fetal-homicide law, which would carry a sentence of up to 99 years in prison. "I'm pro-life, but in the meantime I will defend the rights of these women. I believe they should be entitled to the same rights as every other citizen in this state," she said. She said the "severe penalty" on abortion is one of the most restrictive in the nation. "It's something the Supreme Court of the United States has called unconstitutional and many states have rescinded or loosened their laws in recent years," she said. Jackson, who will be sworn in as a judge on Dec. 19, said she will decide cases without regard to the party of the parties involved. "I will decide cases based on the facts of the case," she said. "I am looking forward to a conservative shift in Alabama." Jackson said she also would like to focus on taking steps to make Alabama a better place. "That includes improving the way the juvenile justice system works, improving the system of child abuse, improving the way our law enforcement system works," she said.
