there are a number of API extensions that allow developers to automate certain aspects of the product's usage, such as online help generation or command scripting.

Applications There are numerous applications that interact with AutoCAD. They can be categorized in six groups: Add-ons which provide functionality above and beyond the functionality of the product itself. Integration solutions that make data easier to work with by providing a method for collecting data and applying a standard format. Connectors which allow to connect external data sources with the product. Applications that allow a user to edit a drawing while being on the web. Free applications that allow for free collaboration and drawing creation. Online services which provide the ability to share a drawing on a network and collaborate on the same drawing with other people.
