If it turns out that is true, it could prove that the Hadean ocean that existed on Earth before life evolved was even saltier than the Dead Sea, and that the theory of plate tectonics is largely correct. Geologists have long wondered how the ocean and the continents came to be linked. The ocean provides the waters that would bury the land, keeping it from forming. If the sea is too salty, it will boil off, forcing the continents to rise and forming dry land. The dead sea, in the central Jordan Basin, lies as much as 30 meters (100 feet) below sea level. It was formed about 16 million years ago, after a huge volcanic eruption caused the Mediterranean Sea to rise. The sea then overflowed and emptied into the Mediterranean Sea and ca3bfb1094
