Part of what made AutoCAD so popular was that it was the first software product to be introduced after the historic 1981 "Autodesk" corporate name change. It was developed by the newly formed Autodesk Inc., following the acquisition of consulting company Environmental Systems Research Institute (ESRI), which developed the first commercially-available CAD system. By the time AutoCAD hit the market, ESRI's use of the "ESRI" brand in the public domain (ESRI is now owned by SPSS) was well established and had great cachet, so Autodesk decided to retain this

name in the new company. Autodesk's marketing strategy was therefore to introduce the first app named after the company, to enhance its brand and to have a product with which it could claim to have been first to market. In the subsequent years, AutoCAD has been continuously developed and extended by Autodesk. This article first appeared on 21 March 2016 and was updated on 19 March 2020. Application model, a set of documents for a set of application functionalities. The applications are organized into blocks or layers, defined by their functionality and the concept of a layer can be used to further group a set of applications. The notion of layers can also be seen as conceptual objects within the application. An example is the set of

applications found in AutoCAD. AutoCAD 2D includes the core applications 2D Drafting, 2D Architectural Design, 2D Mechanical Engineering, 2D Electrical Design, 2D Civil Engineering, 2D Structural Engineering, 2D Financial Analysis, 2D Electrical Design and 2D Manufacturing Development. These are organized in a Block called Drafting. Block and layer can also be grouped into Formats, in which case layers would only include applications used in that particular format. Menu Eating healthy can be easy, even when you're in a hurry I think it's pretty safe to say that we all want to eat healthy. While it's a bit tougher to be healthy when you're in a hurry, it's totally possible! Here are five tips to make sure you're not late to work for a breakfast sandwich. Grab

a piece of fruit The easiest way to eat healthy in a hurry is to grab a piece of fruit and snack on it. Choosing fruit over candy or a donut is a great way to improve your blood sugar levels, your energy, and your mood. All fruit and veggies are a good choice, but a banana and some strawberries are very easy to grab on the way to work. (I'm talking about the fruit/veggies that you'll put in your bag, not the candy that you're going to eat at your desk while you do some work.) If you get hungry, just grab another piece of fruit or a piece of cheese as a snack. Say no to carbs You may think that all carbohydrates are bad for you. And yes, we want you to eat healthy, but you don't want to overdo it with

the carbohydrates. Carbs are not something you can have every single day. They're a treat. Some weeks you need to treat yourself with some carbs. When you're making your next meal, avoid carbs like the plague. Add some healthy fat and protein. Make a few healthy choices The next time you're making your lunch, make a few healthy choices. Don't limit yourself to just eating chicken salad or pasta. Add a couple of vegetable choices, and if you have the time, make a fruit salad to snack on. Eat just enough healthy fat By healthy fat, we're referring to things like nuts, seeds, avocado, and good ol'
