Support for DXF and DWG Format Comprehensive support for all AutoCAD applications (including DraftSight) AutoCAD continues to be the most comprehensive and best-selling CAD tool in the world. For CAD users, marking things up in a drawing is a challenge, but it can also be an easy task for CAD users. They can make changes to a drawing by hand or by importing the data from the CAD application that they are using, in this case AutoCAD, and they can also make changes directly from the drawing with a simple click. We continue to add new features that make it even easier for all users to make changes to AutoCAD drawings. This year we've added many new enhancements that work with document repositories and CAD repositories such as Excel, Access, SharePoint, and the cloud as well as Windows 7 and Office 365. Together with the software updates, the best way for designers to edit drawings in AutoCAD is to mark them up using a drawing program. Our latest updates make it easier to use in the Microsoft Office programs, as well. When you are ready to work on the next version of your drawing, you can do so without leaving your AutoCAD drawing. The new version of AutoCAD will automatically prompt you for the next drawing version. This is different from previous versions, where the tools did not support working with different drawing versions. You'll also be able to make changes to a drawing without having to close the drawing, or even reopen it. We've also improved our tools for working with other applications and repositories. So, for example, you can import a CAD drawing from DXF or DWG format. You can also make updates to a Microsoft Excel spreadsheet while you're working on a drawing using Excel. As with previous updates, we've added new toolbars and tools to make working with other applications easier and to support cloud-based applications. For example, the new toolbars in AutoCAD continue to support the features of Microsoft Office. In addition, you can continue to create annotative and chart annotations in Microsoft Office. Get ready to use our new AutoCAD and do things your way! Version 2023 All new features are in the current release of AutoCAD 2023 and have not been part of previous release trains. With the release of AutoCAD 2023, users can continue to use
