AutoCAD is a top-selling product because of its versatility. Today, you can use AutoCAD to draw, measure, model, animate, and produce print or display output. The value of AutoCAD lies not only in the wide range of drawing, surveying, and drafting options available, but also in the wide range of third-party products, such as specialty rendering and Web-based drawing tools, which are built on the AutoCAD foundation. One of the problems with the latest AutoCAD 2007 is that is requires a subscription to the Autodesk Websolution first, before the user can access AutoCAD 2007. I pointed out in an earlier blog post that the same technology and functions can be used to

obtain access to all the AutoCAD 2000 and newer products. However, I was unaware of the following new capabilities that exists. Have you ever wished you could share your detailed blocks of geometry in a DWG model with an engineer or architect for review? AutoCAD 2007 can do that with Interactive Block Sharing. Use the ABBY command to load the file into a drawing and then you are ready to start sharing. Perhaps you would like to integrate design information from the Internet using Web services. AutoCAD 2007 has a number of Web services such as SOAP, WSDL, RMI, and CORBA. In addition, AutoCAD 2007 understands the following new types of XML: GML and SVG. In addition to sharing your block model as a DWG file, you can work with it using other formats such as DXF, FBX, and VDA. With the release of AutoCAD 2014, the process of installing a trial version is much improved. You can now completely erase your disk or partition and completely install a new copy of AutoCAD with its default files using the Autocad

Installer. I looked at this for the first time and it worked pretty well. So the next question was how to upgrade an existing installation of AutoCAD.

If you have ever written a line of code in LISP and it does not work as a line of LISP, then you may have checked to see if there was any AUTOCAD text function header for the function you had. If you were lucky, you may have found the header. But if you do not have an AUTOCAD text function header, then you can always try using dlsym in the library, which is the same as using GetProcAddress. Note: this is the same as the way the classic dos Lisp.dll uses dlsym. I have not done the same thing in a long, long time. This was an old application for DOS. I didn't bother fixing the problem. I had no clue what the problem was, except that it is a dosLisp.dll (and I do not see why an embedded aacad.cfg.msi would fail to read it). In 1997, I couldn't figure out why every thing I did broke in AutoCAD. It was a pain in the butt. I was so mad at it and angry at ac2dev (I had written ac2dev), especially

since I figured out the problem. So I took the code, cut out the old bit of code, and paste it into ac1\tcs\ul-config.exe, after copy and pasting all the old code into C:\Program Files\autocad 2.0\ac1tcs\dcx.txt. I changed the code so it would use dlsym(). But it would not work. No dice. About a month ago, I wrote a new lisp (LISP) code for AutoCAD LT. And I ran into a problem. I had no clue how many lines of code (LISP) I had written that would not work in AutoCAD LT. Some of it worked, most of it did not. I wrote a LISP function to find out how many lines of code my LISP function would run inside a given AutoCAD LT LISP function. I wrote a text file so that I could see it. Well I could see it in the Classic DOSLISP.dll, but I could not see it in the new DOSLISP.dll. Or maybe I did not try hard enough. I was not ready to admit that I had a LISP problem because it was just easier to blame the old LISP I had and all my experience of course. It was just easier. And things had been working fine for the last ten years. 5ec8ef588b
