Beta: What will it look like? The big news that came out of BlizzCon yesterday was that Overwatch was the game of the year for Blizzard, beating out the long-promised sequel to Diablo III and Heroes of the Storm. While it's still somewhat early in the beta process, I suspect that Blizzard's touch is still evident in this game. Blizzard's assets for this game are both well-rounded and custom. Part of this comes from their IP, which has a sense

of solidity that I think a lot of other games lack. Since the last time we looked at Overwatch, there have been a couple of changes to the game, as has been the case with every Blizzard game since the dawn of time. The beta version of Overwatch has not been officially released yet. This is a closed beta, which means that Blizzard is showing off the game to people that have pre-ordered it. With this in mind, the next time I show you what Overwatch will

look like will be when the game is officially released, and then the game will be in full-on "patching" mode, getting all the new content and fixing all the bugs. For now, there's not much point showing off the game as the beta is in its infancy and changes are coming, both behind the scenes and on the map (meh, you didn't think I'd be sharing screenshots of the beta, did you?). For now, I'm going to be talking about what I expect the game to look like when it's in

"patching" mode. What do I mean by "patching mode"? When a game is in beta, the client is in a mode where they are adding in new content for the game. A couple of times a week, the patch notes get posted on the Blizzard community forums, and we know what's new. In the case of Overwatch, I've seen the full patch notes twice, so I'm going to use those as a baseline for the change in the game.
