The weather gets all nice and cozy, the apple trees start getting really friendly, the flower-picking season begins and the air conditioning starts being a drag. Or maybe you like the idea of the chill coming in like a freight train after a solid summer of heat. If either of those things are true for you, feel free to slap a coat on, close your curtains and turn on some music in your little corner of the sun-drenched world to enjoy this little edition of the Autumnal Macrame List. Today's macrame-inspired project was designed by Jason Shupe, and created as part of the 2011 Crafted by Jason contest. In keeping with the autumnal theme, Jason's project is an Autumnal Harvest Wreath. Like most wreaths, this one seems simple at first glance, but looks can be deceiving and offers much room for variations in personal tastes and creativity. At first glance, the construction of this wreath looks kind of like an upside down model of a tree—it actually is an upside down tree! Jason made the base of his wreath using an inexpensive wreath form and a basic circle pattern pattern. The canvas from which he created his wreath was a piece of 49″ wide cotton fabric. To create the leaves of his wreath, Jason used some scrap wool fabric and it's fibers to design little leaves of various sizes and shapes. The loose fibers he used were then tied into the desired shapes and popped them into place. In the making of this wreath

IObit Malware Fighter Pro 6.4.0.4919 Multilingual Medicine[Bab fullÂ .Robotic-Assisted Laparoscopy for Pelvic Pain in Women: A Retrospective Review of Cases in the United States. We sought to describe the characteristics of robotic-assisted laparoscopy (RALS) performed in the treatment of pelvic pain in women. We performed a retrospective review of women who underwent RALS for pelvic pain between March 2010 and June 2015 at 14 academic institutions in the United States. Cases were identified through the International Robotic Academy database, a nationwide database of robotic cases across the United States. An online survey was used to collect data on patient characteristics, success of the surgery, and pregnancy and oncologic outcomes. Eleven institutions referred 192 women to RALS for pelvic pain. Mean age was 48 years; mean body mass index was 31.3 kg/m2. Mean length of follow-up was 11.5 months. The majority of procedures were performed for diagnostic reasons (n = 73). Indications included chronic pelvic pain (n = 72), interstitial cystitis (n = 15), cyclic pelvic pain (n = 27), and chronic pelvic pain/endometriosis (n = 17). There were no conversions to standard laparoscopy; there were 1 major complication (pneumonia) and 2 minor complications (infected hematoma and renal failure). Perioperative hysterectomy was performed in 16 cases. The American Urogynecologic Society Pelvic Organ Prolapse Quantification System-measured pelvic organ prolapse quantification stage was 0 or I in most cases. Data on pregnancy and oncologic outcomes were available for 96 women. Of the 96 pregnancies, 20 ended in a preterm birth and 3 were aborted; 38 women continued past 6 months of pregnancy; 10 experienced major complications that required early delivery; and 6 had a documented infant birth defect. In this analysis of 192 women who underwent RALS for pelvic pain, the majority of procedures were performed for diagnostic purposes. The procedure was successful in about two-thirds of cases, with most success achieved in the setting of chronic pelvic pain. The major and minor complication rate was 2% and 8%, respectively. The pregnancy and oncologic outcomes of these 96
