Apple Music's new personalized single play feature allows users to play a song or artist's complete work over the course of one week. The feature is similar to a live music subscription service offered by Spotify called Daily Mix, which will launch to the public this week. Many music fans noticed, however, that the new feature has no option for Apple Music subscribers to play songs more than once a week. This is the first time that Apple Music subscribers have been limited to one-play single songs. Apple Music and Daily Mix, on the other hand, will offer unlimited plays of a song or artist's entire work. Chris Chang, vice president of Apple Music, said that the company will be working closely with Daily Mix to offer personalized single play options for Apple Music subscribers in the future. "We recognize that people like variety, and one of the beauties of music is you can revisit the same song or work over time," Chang said. He said that by offering these unique single plays in the future, Apple Music will make listening to a song or artist more "entertaining," as opposed to the "funny thing you played before." "We recognize this is a small, small thing, but it's going to be something that makes a real difference for people," he said. "And then we'll keep working with them to find bigger things that will be more sophisticated in a way to make this experience meaningful for people." For now, the Apple Music single play feature will launch to the beta version of the Apple Music app in three countries, with more countries scheduled to become available soon. Daily Mix, on the other hand, will launch to the public on Tuesday. Spotify recently announced that its new feature is going to be free to the public, which does not include any limitation on how many times a song or album
