Adobe Photoshop also has a virtual clone stamp tool called the Airbrush tool. It lets you make corrections to images by tracing over the original, creating a perfect copy of it. This is an excellent tool for retouches. You can use the Apple Pencil to put in short strokes for fine corrections. Perhaps the most time-consuming yet most important skill is the ability to reconnect edges. You can learn how to select the points where the lines and shapes should reconnect in **Preview**. This is the smarter way of doing it. When you go to **Finish**, the software will just connect the dots for you if you input a starting and ending point for selecting and connecting the segment. The smart way of connecting the dots is to make a quick selection to connect the points. Then you draw a shape or vector object over the connected points. Quickly go to the **Selection Tool** and click on the line or shape you want to select. Now, click on each connected point and you will see a circle with a red line connecting the point. Now select the line or shape and then press the shape menu and select **Undo**. This is a fast way of selecting points and then drawing them. In some cases, it can even be done quicker than anything involving traditional selection tools. If you want to add more advanced effects like blurs, gradients, or drop-outs, use the **Utility** tab. There's a ton of tools to enhance the original pixel effect.
