Camera Raw and Adobe Camera Raw The Camera Raw option is located on the Info tab, and enables you to control the images in one window. You can also open the individual raw files and apply edits. At the very bottom of the Camera Raw window, you find eight tabs that enable you to adjust the color, levels, sharpening, shadows,

highlights, and exposure. You can adjust any of these features, as well as the white balance, saturation, and hue. You can also manipulate other adjustments like vignette, lens distortion correction, and sharpening. Adobe launched the first version of Camera Raw in Photoshop CS3. ## Chapter 5. The Selection Tool

PHOTOSHOP'S SELECTION TOOL is designed to select

areas of an image and cut them out or copy them. The selection tool can be used to select solid areas of an image, as well as layers and text. You can use the selection tool to create selections on your layers so you can work on just those areas. You can also remove the selected objects from an image, merge them together, add a layer mask, or copy them. ## The Pencil Tool The pencil tool

is used for simple selections, such as straight lines and shapes. The pencil tool is used to draw simple shapes around objects in an image. You can use it for creating shapes like letters, circles, ovals, and squares. ## The Magic Wand The magic wand tool can be used to select solid areas as well as outlines. It provides a magic wand, which can be quickly controlled to trace

around areas in an image to create selections on the canvas. You can control the size of the selection as well as the color of the area you are selecting. You can also use the magic wand to select objects in an image; then you can use the Move Tool to drag and drop those objects. You can also drag and drop objects onto other objects on your canvas and easily move them around in your image. You can use

the magic wand to select an image, making it easier to work with all the objects in the image. ## The Lasso Tool The Lasso tool can be used to select and drag an area of an image, like a selection of a flower or part of an image. This selection tool is also

Open GDF Suez de Cagnes-sur-Mer Alpes-Maritimes - Singles 2013 Singles

SinglesThe use of an uniparental isoschizomeric alpha-satellite probe for the karyotypic detection of the centromeric region of several rat chromosomes. The centromeric regions of eight rat chromosomes (RChr 7, RChr 10, RChr 11, RChr 17, RChr 19, RChr X, and RChr Y) were studied by the mapping of

centromeric regions containing the alpha-satellite sequences GT2, GT3, and GT4 using the method of FG/RSAF hybridization (FISH). RChr 7, RChr 10, RChr 11, RChr 19, RChr Y, and RChr X did not contain at least two alpha-satellite sequences of the same family; on the other hand, RChr 17 contained three types of alpha-satellite sequences, GT2, GT3, and GT4. Thus,

the alpha-satellite sequences GT2, GT3, and GT4 were selected to study the centromeric regions of the chromosomes. The hybridization patterns revealed that the centromeric region of RChr 17 was located at the pericentromeric region. The
