When posting on the forums and across various social media, about desktop usage and/or laptop usage, and such, we get a lot of questions from users regarding their hardware and such. If you agree with our strategy of only posting information pertaining to our readers, since we know this is a major point of concern for most Linux users, especially when discussing hardware with other people, I'd like to motivate what we are doing with:

What we've done, for this holiday season, we'll be organizing a survey.

Since this is a major issue for most Linux users, and we all love Linux, and can't stand the thought of any additional losses of any sort (heard the new ThinkPad Max's audio issue before it was known), we can do so much better.

So, for this year, we'll be asking users to provide details on:

- 1) Hardware, whether a laptop or desktop
- 2) Laptop information

Q: Convert Pandas DF with time datatype to datetime and then to timestamp Using Python, I have a dataframe with strings such as 2011-11-23 or 2011-11-24. The strings represent a time value and is a datetime format such as 19:15:01. But, when I try to convert it to a timestamp, it outputs False when I try to do so using the following code. What do I need to do in order to correct this and get a timestamp with it?

```
i = df[df['Time'].str.startswith(f' {d} : {dt}')].copy()
i.to_datetime(format='%Y-%m-%d')
```

Here is a sample of the sample dataframe: ID Time 1 2011-11-23 2 2011-11-24 3 2011-11-25

A: `df['Time'] = df['Time'].astype(str) #this changes it from datetime to string`  
`df['Time'] = pd.to_datetime(df['Time'], format='%Y-%m-%d').dt.strftime('%Y-%m-%d')` here is your desired output:
