You must become master of the spiritual art of Mahjong. Control all 32 tiles in a truly immersive environment. Your objective is to remove all the tiles from the board. The difficulty in placing the tiles depends on the player's tactic and ability to form winning combinations. You will be immersed in a world of soothing colors, professional music, and mesmerizing atmosphere. Relaxing VR Games: Mahjong: Highlights Presence: Manipulate individual pieces in the virtual space. You need to master both the physical use of your hand and the mental strategy of the game. This is possible thanks to the intuitive controls and specially mapped to the Oculus Rift. Immersive Environment: Enjoy a photorealistic 360° environment in which you can manipulate the tiles and the background. Relaxing Game Experience: The most important element in relaxing VR games is that they should relax the player, not stress. Therefore, the game was not adapted to the classic gameplay of Mahjong. Instead of single pieces, the game focuses on the whole board. Reviews IGN: I tried a few different VR games to pass the time at my desk, but I was hooked from the moment I laid eyes on Mahjong for the first time. To steal a line from the team's tagline: Mahjong is spectacular, and I can't wait to play it more. 3Player: The experience is relaxing and addictive! The gameplay is easy to pick up and the game is well presented with a full tutorial. The backgrounds are high resolution and immersive. You even get to appreciate the aesthetics of Mahjong with some impressive visualization. Currently UML has only one feature called 'Architecture' which uses detailed description of the architecture of the system. By using this it becomes easier for the developers to understand the system easily but I came across scenario where I want to show the client the entire usage of the system in a
