V331mediafirerar Computerized axial
tomography: detection and localization of
gallbladder stones. The most important
abnormality detected by computed
tomography (CT) in 15 patients with
proven gallbladder stones was the

presence of stones. Stones were visualized and their location precisely determined in eight of 10 patients with proven stones, and in all five patients with proven stones whose gallbladders were surgically removed. No false-negative results were obtained. Of 19 cases of cholecystitis, 13 were associated with stones. Extracolonic abnormalities were demonstrated in 30% of patients. Although CT of the gallbladder is a useful method to detect stones, its main value lies in the visualization and localization of stones.// \$Id: RX_XMT_Attribute.inl
