* **Photoshop Elements** is an integrated program designed for consumers who want to take advantage of creating and altering raster images without a pro's toolset. You can use it for basic tasks such as cropping and organizing; you can also make simple edits, or you can create your own online-photo-sharing site. To create the file that Elements uses, you first open an image in Photoshop, create a new file, and then open that file in Elements and paste in your edited

copy. You can create and manipulate layers in Elements in much the same way that you do in Photoshop, and in many ways you can accomplish a lot more when you're working with fewer layers.

Elements doesn't have as many sophisticated features as Photoshop does, but it does come with many features that make it well worth a look. You can also use Photoshop—or Elements—to open an image in other image-editing programs, such as GIMP (described on the previous page), and then export the image to the other program again. And you can also use Elements as a drawing program. For example, you can use it to draw boxes around things, or use it to draw shapes with straight or circular lines, or

make arrows or other types of symbols (see Figure 14-7). Figure 14-7. Elements lets you draw shapes with lines, then save the shape as a symbol. This vector-based program uses a patented drawing technology that can make shapes that follow your line strokes, producing shapes that appear to be painted (or drawn) on the screen.

Ashley F. Weil The Clarion-Ledger MISSISSIPPI -- A White House budget that includes deep cuts to national parks would include a proposal to reduce air tours over some of the parks, a Mississippi congressman said today, a move that some national park advocates are crying foul. White House budget planners met with Mississippi Rep. Steven Palazzo, a Republican, over the weekend, and included plans to reduce air tours over some of the parks, the congressman told The Clarion-Ledger. He said the move would not only affect visitors from the Deep South, but from outside the region as well. It's not

clear whether the proposal is serious, or if it would ever be put into action, or if it was part of a game of political "gotcha," said Steve Russell, executive director of the National Parks Conservation Association. Russell said he has been advocating with the White House for its to increase spending on national parks. National parks in Mississippi would benefit, not only as an economic driver, but from increased tourism, from a state that works to protect the environment. "We're trying to protect important natural, cultural and historic places in America. That's what this is about," said Russell. "I would hope that the White House is looking at the whole budget, and that we've got

significant increases in funding for national parks." The White House did not directly address the issue with the proposed cuts, including a reduction in the number of flights over four of the national parks, including

- Mississippi's: -Great Smoky Mountains National Park
- Yellowstone National Park
- Rocky Mountain National Park
- Mammoth Cave National Park

White House spokesman Eric Schultz said the White House has "particular concerns" about the budget plan, and pointed to broad spending cuts in the budget in the short term, but hopes "to work constructively with Congress to build off last year's bipartisan agreement to protect these vital resources for future generations."

Nancy Franklin, policy director for the White House Council on Environmental Quality, said the changes in the budget are something the White House would like to see. "We are pleased that the president's fiscal year 2014 budget would maintain current funding levels for wild lands in parks across the country," she said in a statement. "Through our proposed budget, we are also proposing to increase funding for trail and river restoration projects." The budget proposal
