The Adobe journals are the most interesting new feature to me. It can be accessed from anywhere and lets you keep track of your creative process. The "Journal" feature was introduced in Lightroom, but the Photoshop Journals are interactive and more comprehensive. It's possible to use the Journals as a camera or as a checklist and allows you to enter your ideas right in the dialog box, as well as share everything with your team. It also allows you to collaborate with others while in the journal. When I started using the Sensors app with Adobe Camera Raw, I knew right away why Adobe wanted to call it "Sensors." I simply just couldn't live without it. It's been years, but it's still one of the most convenient and effective ways to get raw image data into Photoshop. **Overall –** Lightning fast, iA has makes a strong case for the best professional photo workflow application available. Overall, things are executed with a clear focus on workflow rather than on eye candy. **Speed —** Lightning fast. In fact, I hadn't noticed any difference in how the application performs. Some elements may function slightly faster than the prior release, but when you add in the speed improvements of some of the other new features, it's hard to notice. **Motion Graphics —** Adobe After Effects is a very powerful and flexible tool for motion graphics, and iA has it working well. This tool is good for designers who also need to create motion graphics.
