Update GT Suite With Update Build 4, how to update bios with ai suite, update lg g3 with pc suite, suite updates1.4.4 Intake and Exhaust Valves.. step-by-stepÂ .Q: m2e plugin for eclipse I have tried to create maven project in Eclipse. I have java project(src/,main,test) in Maven format. I have created Eclipse Maven (M2E). I have tried to import this project into Eclipse but I can not see the folders src/,main,test in src. I have imported the project as a Maven project (Import -> import -> existing project into workspace). After this I can not see the folder src in the project explorer. Could someone tell me how to import the project. Thanks A: In Preferences->Maven->Deployment Repositories make sure that src/main and src/test are added to the Deployment Repository section. In Preferences->Maven->Project facets click on the Maven Tab and make sure that Build Path In Preferences->Maven->Maven Settings make sure that \*Maven home directory\* has been added. Q: xargs commands How to grep multiple text from all the files in the current directory? The command I use is xargs grep -n 'text' \*, but it only searches a single file, not all of them. The output is like: find. -type f | xargs grep -n 'text' A: There's a couple of problems with your command. One is that you're using find's -type f and then piping to xargs which requires -print0, and so find's output appears to get split up over many commands. Use the -0 option to xargs instead. find. -type f -print0 | xargs -0 grep -n 'text' The other problem is that if you aren't using -n, grep will just print matches in stdout (and doesn't store them in files). To use -n, you have to use -l or -r. xargs, however, takes an argument that represents the list of files to pass to grep. This is a special feature of xargs that can often be a huge time saver. You can use
