Features AutoCAD is a general-purpose, vector-based (2D) CAD system that supports 2D and 3D design. An integral part of the AutoCAD product is its "MSPE", or Microsoft Standard for Production Engineering, programming interface. The MSPE library provides a common set of data structures and commands for all AutoCAD commands. As such, AutoCAD does not depend on any particular programming environment. However, AutoCAD does provide a .NET wrapper, which allows developers to use the MSPE library in their own programming environment. AutoCAD supports three different types of objects: vector, raster, and font. Vector objects are shapes that have vertices and segments. Raster objects can be bitmaps, or raster graphics. Font objects are scalable text and line drawing objects. Another major part of AutoCAD is its database system, the Database Management System (DBMS). The database is primarily used to store model information that includes blocks and their properties. A block is a self-contained collection of two or three-dimensional drawings, tables, and text. The key to blocks is that they are referenced, and not copied or moved. An additional key aspect to AutoCAD is its undo and redo system. Each command is associated with a "command point", a set of coordinates that refer to a single point in the drawing space. When drawing an object or editing text, an object's shape, position, or properties may be changed and saved at each command point. As commands are executed, the commands between each point are saved to the database, and the database record for the drawing space is updated. Drawing and editing commands in AutoCAD are organized into six categories. The first is the basic drawing commands,
