A Plague Tale Innocence Update V1 07-CODEX

A: A Plague Tale: Innocence is now avaiable on Xbox One, PlayStation 4 and PC, complete with the added-on Coats of Arms DLC. This is, unless I'm mistaking, the first release of the game since the previous update, 1.07. 1. Once A PLAGUE TALE: INNOCENCE is finished downloading, double click setup.exe and make sure you have "Copy contents of CODEX directory to gamedir"Â . Q: What is the easiest way to duplicate tables in Rails? A general question about how to handle this. It seems a simple thing to do, but I can't find an answer. I have an app running with a bunch of tables. I want to duplicate all of the tables. What is the easiest way to do this? I tried running rake db:create which, among other things, runs a sequence of seeds that creates the DB. I run it, and it takes a few minutes. It's not time-critical to me, but ideally it would have been quicker. And then I tried rake db:setup which runs setup. This gave me an error (since I only had a populated db up so far, I assume), and ran nothing else. I'm using Rails 3.1. A: I think you're going to have to do a migration first. If I'm not mistaken, this will let you migrate only the tables that have changed, and maybe just run another "CREATE TABLE" in there. If you had a backup of your schema, you could "infer" what needs to be created and copy it. Maybe you can find a tool to do that, or at least give you a good hint. Data sequence number, above which data will be discarded The sequence number counter is incremented to '5' at startup and no received data is accepted until it is decremented to '0'. This provides an early output indication of signal breakdown, e.g. due to a transient or associated glitch. This counter (counter number 3) is cleared if the signal is lost. If recovery of the signal is attained, data collected since the last counter clear event is received and interpreted, starting at the maximum data sequence number supported by the system (254,294 1cdb36666d
