If you are used to opening Lightroom and then opening a bunch of photos into a new project with the same names Lightroom has been doing this for a long time. Yin Yang Photos organization is one of the best features of any photo tool I've used. When you organize your photos with the new plugin, you can drag and drop into new folders. You can then work in each folder with the new workflow system to find the photos that have yet to be cataloged. The old workflow system seemed to keep a separated version of your photos. You could only pick one instance of a photo to work on and it would not allow you to see everything that was available. Now each time you open your organization project file you can see all the photos you have and that allows you to focus on what you need to.
