Pogba to keep hold of his international shirt for a year 18.01.2018 16:25 Zinedine Zidane has revealed he was prepared to hold onto Paul Pogba this summer. The French coach opted not to let the Manchester United star's departure to Real Madrid have a major impact on the team's tactical set-up. Pogba had expressed a desire to move to Spain, where Zidane has previously coached. When the news was announced, Pogba acknowledged his friends Sergio Ramos and Karim Benzema in particular are often linked to the position of No.10. "I think we have proved over the past year that we can still be an attacking threat with a different starting lineup," Pogba said at the time. "We can be more than one without him. We do not need him to do everything." Zidane knows Pogba's ability well and believes his position in United's starting XI makes him unique among current players. "Pogba does not need to score goals," he said. "He can decide the game from a different point. He doesn't have a number 10 role, he's a number 10." Zidane added: "He is a player that makes everything easier for everyone else." The French coach admitted there was little chance of Pogba returning to the national team for a friendly in June. Zidane was named as the new manager on Wednesday.**ABSTRACT:** Black chromium (Cr) poses a great potential threat to the natural environment. Adding the annotations from AutoCAD to a PDF creates the same effect as if you were "redrawing" the drawings. PDF Import Support for Word, Excel, and Other Files You can use a PDF with annotations in the same way you can use a JPEG or PNG with annotations, and you can add all the same types of annotations. Now you can use the PDF as a source for those quick "Add to Drawing" changes you make in AutoCAD. "Add to Drawing" and Exporting for E-Mail: You can set your e-mail client to automatically add the drawing to the e-mail message. Add your drawing to the clipboard. The drawing will be sent to the e-mail program on the recipient's computer. Another great thing about this new feature is that you can select a drawing in the Windows Clipboard. With this new feature, you can copy drawings right from the Clipboard. New Drawings: Editables: You can edit most 2D editable objects. (Create 3D surfaces, polylines, lines, and text) You can now rotate and scale any editable object. You can even extrude an editable object. You can easily delete and move objects using the right-click menu. You can also select objects and copy them. Selecting and copying objects is faster, because the command shortcuts are stored in the ribbon. You can move and copy from the edit menu or from the right-click menu. You can also create new objects. 3D: You can directly create 3D surfaces, polylines, lines, and text. You can also draw into layers. You can place objects in 3D space using all the tools you use in 2D, including the wireframe tool and the "pen tool". You can easily add text labels to your 3D objects.
