In Photoshop however the choices are obviously limited. Filled layers no longer need to be closed off with a transparent background. To smooth out the edges of a photo you can apply the Gaussian Blur filter. In addition, Android users can now toggle the status bar to turn image editing alerts on or off depending on how aggressively you want to be able to use your phone. The new PDF Export can compress your creations to reduce the amount of data that needs to be transferred. More than this though, the most exciting feature is the Photoshop Dynamics Panel, which allows you to draw a shape in the Photoshop canvas and map it to the shape in an attached Illustrator file via an interactive graph. It drives transforming geometry and transforms easily into a hierarchy. Next is the ability to multitask with dual monitors. It allows you to use one Display for Photoshop and help you on your desktop and a display to the side for viewing all open windows, open documents or other Photoshop tools. You can even use the display to play back video while working on a photo. You can bring your tools to full monitor while doing the video, which is a fantastic way to work, especially with watching videos whilst editing can take up a lot of time. It's also really easy to go back to Photoshop if you do need to leave the video playing. With Elements available to anyone in the world, it's nice to see that Adobe has finally gone the extra mile to make graphics and portrait editing easier, by allowing you to edit facial features, skin, eyes, hair, clothing, teeth and any other parts of the body.
