Advertisement More Software from the Developer Prolog+CG - Prolog+CG is an integrated development environment to interact with the Prolog programming language (It provides users with a user-friendly IDE for Prolog and CG, the programming language used for artificial intelligence and computational linguistics. This is a portable application, so it can be installed on any computer without the need of a setup. Prolog+CG is written in Java, which is a programming language based on the principle of object-oriented programming (OOP). In Java, you can also create your own graphical applications, which can be launched from the operating system menu. The Java Editor is a well-known and reliable application with many functions for editing, designing, compiling, compiling and debugging. The Java Editor is a program that runs completely without an additional setup. The Prolog+CG package also comes with many plug-ins such as the Toolbox to configure how the IDE looks, the Debugger to visualize the execution, the Fonts to change the text font, and the Language to check if the desired language is among those available on the system. Another advantage of the Prolog+CG Package is that no new entries are made to the Windows Registry and Start menu. Prolog+CG comes with many configuration settings, such as a document created in the IDE,

which can be opened and modified in a normal text editor, a XML editor, and a Microsoft Office word processor. Prolog+CG can export your data to text files, databases, and other languages. The export can be done by itself or when you right-click on an object in the GUI. For example, when you create a new document, the Prolog+CG application can choose a template based on the extension of the file to be created. Prolog+CG can import user-defined applets. The importation can be done from the XML file that already exists in the program or from a menu. The application also allows you to set the title and text size. The feature works on the text itself. The designer doesn't have to go to the menu and choose the object manually. This is a useful feature if you have a lot of objects on the screen. For example, if you have a
