June 29, 2020 - Ideal PSIM switches are controlled by on/off signals. Thus, you can only connect a certain element to the gate of your triac. If you want to do something... but not right now, you can keep the shutter off - that's the "off" mode. When you want something to be on, you turn on the shutter and it does what you want it to do. If you want something to be turned off, you turn off the shutter. This is all. That's no problem at all. It can also be "standby". Then you turn off the shutter and the device waits for something to be activated. And then it will turn on.
