Because we'd moved beyond our original goal, I spent time creating shading layers and an adjustment layer to work in and bring out color from the white background. Cutting images in a way that's as clean as possible is a lot like selecting which fabric you'll use for a favorite outfit. You can either go for traditional methods, either by setting your selections directly on an image or by placing them on a layer and trimming by hand, or you can get more artistic with your editing. You can add various effects to the images and you can also create your own graphics, text and shapes. You can create composites with various layers and configurations, clone images, apply a mask, use filters, apply a gradient, and so many other design enhancements. You can also erase the unwanted image and disappear it. You can also arrange move, duplicate, flatten and combine layer to create an image to your desired design. Because of the availability of different application files, you can create a project file, PSD or Photoshop document that is necessary for you to embed a number of photographs. The line pattern and design gradient can also be used to find a smooth gradient.
