Photoshop Elements is one of the more sophisticated tools we have at handling improved quality images. Depending on the number of pixels in the picture, it can take some time to improve color depth and other attributes in Elements. No matter, because for most people, Photoshop Elements is an efficient way to enhance their images, it is time well spent. One of my favorite features of the new Photoshop is the Auto Colored Vignette. It changes the outside of the photo to have a softer more natural edge. I used to have to use some heavy software like ACDSee or Photoshop CS2 to remove the vignette. With this new feature, I don't have to do it at all. I can just include it in the file or leave it out entirely. In the past, I've had to use a paste watermark file onto some of my images. While this was effective, it doesn't really stand out in a lot of instances. The new branded watermark feature adds a watermark that can actually link to your promotional website or even give you the benefit of being able to send your logo on to clients. Network connections can't be used to generate the file, which leaves it in first-gen status.
