Last week, the FCC released the results of a report into how digital connectivity is distributed across the U.S. According to the report, Internet service in poor areas in the United States is vastly underrepresented and, in some cases, non-existent. The FCC studied 162 communities where there were 1,000 people or fewer, to determine the effect of poor broadband access on employment, educational attainment, economic activity, and public safety. According to the report, poor areas had less than half the number of people with connections to the Internet as wealthy areas, and even worse
