The program is a powerful utility that allows users to manage all the keys that exist on their computer. It can be downloaded as a standalone application, but this is not recommended, because it would mean more than 30 MB of space are needed. Here, the keyboard shortcuts to be used are introduced. Moreover, you can set the shortcut for any command and adjust the order in

which they are triggered. In addition to that, a preview window, which displays an image of the character typed after pressing a certain key, is available. Besides that, the program can display a customized keyboard and define text and font styles. It also includes a file size and path display. When the application is first launched, a tutorial section is provided, showing how to use the program. There is also a help screen and a

shortcut menu, where all the functions of the software are detailed. KVR Developer is available in a free version as well as in a paid one. We liked the free one, as it is fully functional, and we do not advise users to purchase the Pro version, because it will make them more than 30 MB of space are needed.
