The product family of software, referred to as the "Autodesk Modelling Toolbox" (shortened to "Model Maker" in the Autodesk desktop applications suite), was developed by Autodesk to provide a set of reusable add-on applications for AutoCAD and other products. The products are distributed by Autodesk, and are not offered in the Autodesk Exchange Apps store. In addition to the AutoCAD family, the Model Maker product family includes products such as Pro Engineer, NC Design Live, Envisat Toolbox, Map3D and ND Access, amongst others. Also known as the "Pro Evolution" software or "Dynamics", this product replaces MicroStation for the creation and simulation of engineering, architecture and construction projects. It is a building information modeling (BIM) software package, which is integrated with Autodesk Revit. The software features a graphical user interface with six main windows (called Panels) that display various properties of the model: Top: Top view or elevation view of the project. In this view, buildings and architectural elements are displayed. Panels like Roof, Wall, Elevation, etc. are visible, as well as the values of certain properties. Right: Right-side view of the project. Shows the project as viewed from the right. In this panel, many elements are visible, such as: greenhouses, roads, plan view of buildings, etc. Back: Displays the side of the buildings which is facing away from the user. In this view, elements like windows, doors, rooftops, etc. are visible. Bottom: Displays the bottom view of the buildings. In this panel, elements like columns and stairs are visible.
