The process of editing your photos has been significantly enhanced with the new features in this major update bringing a host of new features and improvements. Here are some of the most notable ones. Adobe Photoshop CC 2018 sports an advanced brush tool. It now allows you to vary the line weight and finish - no more uniform line options. You can now round off lines, or create various line patterns. The subaspect ratio now allows you to keep the aspect ratio or stretch the lines to keep the proportions intact. It also supports auto save and auto restoring. Let's take a look at how to work with it. The easy-to-use freestyle tool now supports both flags and colors to easily create a selection and you can even use the VR camera view to check the before and after before even clicking in your image. You can be very precise, or you can be wild, whatever you want, the lines are limited only by your imagination. The Redo tool is now built around an ink bucket log so that, when you undo an action, you'll see where the previous action worked on your image. The Undo Tool has also been expanded to give you control of active layers, groups, panels etc. This eliminates the need for separate Undo controls. When working in a certain environment, such as a landscape, you want to paint on the scene and not have to blow up the work. With the surface type layer, you can completely block out color, using only a standard brush tool as a guide and retaining the color assigned to the layer. You can paint on top of the layer and the color will change, allowing you to capture different aspects of the scene.
