Incredibly powerful and versatile, NDI Studio Monitor runs on any compatible laptop or workstation, and allows you to see any available NDI channel in real time, arrange multiple NDI channels for live monitoring, and deploy instances for a range of professional signage and display applications. Using the Analog Discovery Studio 4 is easy; the unique graphical user interface includes familiar functionality that provides the same tools for analysis as other common data acquisition software. Unlike other data acquisition applications, the Analog Discovery Studio has a dynamic waveform editor that allows the user to edit and view waveforms live as they are being acquired. As with any microscope, you should download the latest version of the WaveForms Software Development Kit (SDK) that is necessary to connect your model to the Analog Discovery Studio. If you have a model that is not supported by the latest SDK, it should work by adapting the code to use the current SDK features. WaveForms is the free software application for the Analog Discovery Studio and enables use of the available analog and digital instruments. The software has been refined by customer feedback for over 10 years and features a computer and laptop friendly user interface that has the feel of traditional benchtop software. The Analog Discovery Studio communicates with WaveForms via a USB connection to your computer, allowing users to capture, record, analyze, and generate mixed signal and mixed domain waveforms. WaveForms can be downloaded and installed in under 60 seconds and can be tested without hardware using its demo mode feature. In addition to the use of instruments in the application, the WaveForms application has a script editor tool, which allows custom scripting of the instrument in JavaScript. WaveForms is designed to be run on a laptop or desktop computer and is Mac, Windows, and Linux compatible.
