A solid drawing unit is a portion of a drawing that can be analyzed for features and properties. The components that make up a solid drawing unit will be grouped into a single window called a Geometric Properties window. Drawing components are grouped into document windows, which may be called views, windows or tabs. For example, the components in a drawing may be located in a Geometric Properties window that appears in the same tab as the drawing or they may be located in a separate drawing window called a Drafting window. The icons used throughout this guide are shown below. Tabs The drawing components are grouped into document windows called views, windows, or tabs. Tabs can be removed, moved, or expanded to any number of views in the drawing. Tabs can be merged together so that there is only one tab containing all the drawing components in a view. Tab manipulation is initiated by clicking on a tab. This will bring up the tab bar, shown below. The Tab Bar There are several different types of tabs. The tab bar can be hidden or shown. The Insert/Split/Merge tab The tabs in a drawing are represented as icons. When a new tab is created or a new drawing is opened, the icon representing the new tab or drawing is displayed in the tab bar.
