Unfortunately, the overall “Native Speed Lightroom” feature is limited to advanced users, because it excludes some of the most basic tasks in the interface. Here are some of the features it currently lacks: automatic, instant previews; automatic, instant previews with a color profile applied; automatic, instant grid alignment; and exporting images to a folder with long names. It would my best guess that the Source review is very thorough, and thus these missing features have been noted as an oversight. Source also describes the Adoption and Privacy Camera Profiles option for new users. By clicking on one of the predefined camera profiles (e.g., “Sigma 35mm F1.4”), the user gets a representation of how that particular camera will perform in Lightroom. This is a very interesting feature and useful for novices who want to avoid using the incorrect profile. However, it would have been good to have access to more profiles and the option of picking one in the drop down menu, rather than only few offered by default. Discovering new features in Lightroom 5, especially ones that have been around for years, was the main concern behind this piece of writing. Lightroom 5 has become a much needed update after Adobe kept nailing their version of the company’s flagship software, the company’s flagship product for its professional photographers, every time they rolled it out. Lightroom is a powerful application that provides users with the best version of the Photoshop interface that they can find.

And here's something you probably never knew. You can now right-click on a layer which can in turn allow you to move, resize, rotate, crop the layer, and delete it at the same time. You can also apply a fill, adjustment, type, adjustment layer, adjustment layer mask, effect, or anything else you wish by right-clicking on that layer. Another major change in Photoshop CS6 is interactive crop. Now you can expand or shrink the crop selection box around any object to see what overlays you may be missing, or even better, what you can legally photograph. When you're done, just click and the final crop is added to your clipboard. This was previously available only when working with specific templates. It's also worth saying that CS6 now includes a new advanced retouching tool called Content-Aware Fill, which allows you to remove objects from photos that you don't want in them. All you do is "tell it what you don't want, and it highlights the area where the content is hidden. To combine new fills with other photographic elements, you can group objects and add new fills as masks to them. This is another handy asset to have when it comes to your business. Moving on, you can simply press the Space Bar and then select any object on the screen, a whole lotta selections. You can increase or decrease the number of steps in between, which makes it easier to work with. That's useful to find out how many times you can enter a frame before it starts moving too far from you.
