Using your browser navigate to the Autodesk Autocad home page: Click on 'Download Autocad' and your product key should be under 'Activate Your Product.' Credit: CC0 Public Domain Travellers between North America and Asia will be subject to a much more stringent screening process at U.S. and Canadian airports, if a new amendment to U.S. immigration legislation becomes law. The proposal, which has bipartisan support, would require U.S. Customs and Border Protection to enhance screening of electronic devices larger than a cell phone at all U.S. land, sea and air ports of entry, to ensure travellers are not bringing in potential explosives, money laundering or child pornography. The bill, introduced in the Senate on Tuesday, would also extend the requirement to carriers, and not just airports, for international flights within the U.S. The legislation, if passed, would effectively mirror Australia's import screening procedures for international passengers. That new legislation was passed in December, and has since been debated by Australian parliamentarians. One of the reasons for the Australian government's move is to ensure the integrity of its border protection system. "The United States border with Canada is the busiest land border in the world, and our Homeland Security Investigations (HSI) agents are already investigating more than 7,500 cases a year related to money laundering, child pornography, and child exploitation," said Senator Roy Blunt, the Republican chairman of the Senate Homeland Security Committee. "This amendment would give our agencies additional tools to pursue and disrupt these types of criminal activity." Senator Kirsten Gillibrand, the Democratic ranking member of the Homeland Security and Governmental Affairs Committee, lauded the legislation, saying it would help ensure the U.S. "reaches its full potential as a destination for travel and trade." While many of the risks posed by travellers with large electronic devices are limited to airline passengers, there are many other types of travellers who are also subject to enhanced screening, including those entering through land or sea ports of entry, those using commercial carriers, those flying to the U.S. from the Caribbean or other foreign countries and those flying to North America from Asia. Expanded Enhanced Questionnaire The proposed amendment, which will be debated in the Senate on Tuesday, would require the U.S. Customs and Border Protection to amend its screening procedures

Incorporate markup from your own paper or PDFs, with no additional file types or pre-installed markups, as text and even lines or arcs. Import your own markups as any other type of annotation. Add your own attributes, including title, time, etc., to markups for references, and view the attributes as annotations at any time in your drawing. New Markups and Markup Assist: New ANSI Title Formatting: Add ANSI Title formatting to drawings and annotations, such as ANSI color, bold, underlined, or other customized attributes. Incorporate title formatting from other drawing files, adding attributes to existing marks in your drawing. Share the latest title formatting, and view the changes and updates to your drawings from remote systems. Per-Markup Automatically Configured for Title Formatting: Configure all properties of a new or existing mark in your drawing to automatically support the formatting of titles. For example, you can automatically convert text to bold, underline, or another title format in the title bar, and also automatically configure all properties of the mark as title formatting. Incorporate formatting changes to your drawings with one command, and configure all properties of new or existing marks for title formatting. View the latest title formatting settings across your entire team in the drawing settings, and share the latest title format settings among your team. Incorporate Settings for Title Formatting: Add an instruction to your drawing, and automatically configure every property of the instruction to support title formatting, including title format. Add annotations or labels to your drawings with the text in the style of the title formatting. Share the latest title formatting setting from one instruction to other parts of the drawing. Configure the text and title attributes of shapes, markers, and other annotations, and use the settings to automatically configure all properties of new or existing marks to title formatting. Create and apply title formatting in properties: Edit the settings of a property to automatically apply it to the first mark created in your drawing. Edit the settings of a property to automatically apply it to every mark created in your drawing. Edit the settings of a property to automatically apply it to any new or existing marks in your drawing. Edit the settings of a property to automatically apply it to every mark created in
