* See Chapter 11 for more on the Photoshop CS6 Essentials: The Power of Light study guide. * See Chapter 12 for more on working with layers. ## Chapter 9. Understanding Bit Depth, Color Depth, and File Formats * **Bit Depth**. **Bit depth** refers to the number of bits (binary digits) used to represent a digital file. Bit depth is considered a property of the file that you create, and is the number of bits per color, or pixel, in the final image. * **Color Depth**. **Color depth** is the number of colors you can add to an image file before it begins to look unsightly and blurry. Color depth refers to the amount of color a file can hold; the higher the number, the greater the number of colors that can be used. * **File Formats**. **File formats** are the ways that raster images are compressed. There are three basic types: * **Compressed**. When you create a digital image, the camera records the image as a raster in a compressed file format. The most common method used by cameras is the .jpg format. To reduce the file size, the camera compresses the raster image. The .jpg file format is known as **lossy compression** because it loses data. * **Packed**. When you compress a file, you add more than one raster image together. The .tif format is the most common method. When you work with a packed format, you typically use the Photoshop program to manage or combine the individual rasters together as one image. The .tif file format is known as **lossless compression** because it does not lose any data. * **Raw**. You can capture an image using a raw camera. To record the image, the camera performs a **lossless compressive conversion**, which sets the image as a .cr2 file. In this book, you'll learn how to use the .cr2 file, and how to work with the .psd file.

Distribution of epitopes of the maternally transferred antibody during pregnancy in the sheep. The humoral immune response to the reticuloendothelial system (RES) autoantigens, asialoagglutinin (ASA) and globulins, was studied during the growth of the fetus and placenta in the ewe. The distribution of epitopes of the maternally transferred antibody of ASA and beta-globulin class was studied from early pregnancy, through the term, to the placenta by the ELISA technique. The results showed that antigen binding activity of the antibody to asialoagglutinin was present from early pregnancy to birth. Epitopes were distributed continuously in early and mid pregnancy. However, epitope deposition on the placenta was not observed until term. The reason for the delay in epitope deposition may be due to the absence of placental tissue. The antigen binding activity to the beta-globulin was observed from early pregnancy to the placenta. In contrast to the results with the asialoagglutinin, the active

What's New in the?

Q: How can I get rid of this endless space below my news feed? On this test site, I am struggling to get rid of this endless space on the right under my feed. I see I must use justify-self: flex-end; but that pushes the other items down. I do need that stretch-x at the bottom, but I need to get the other elements to stick to the bottom. Here is the relevant excerpt from my css:

```
.fb_feed.inset-rec-row { margin: 0; } .fb_feed.fb_list.fb_article { padding-top: 5px; padding-bottom: 5px; margin: 5px 0 0; }
.fb_feed.fb_article { height: 200px; } .fb_feed.fb_article_details { display: inline-block; border: none; min-width: 370px; max-width: 350px; width: 100%; padding: 0; margin: 0; vertical-align: top; } .fb_feed.fb_article_details.fb_listing_title a { font-size: 17px; } .fb_feed.fb_article_details.fb_listing_title a:hover { text-decoration: none; }
.fb_feed.fb_article_details.fb_listing_image { max-height: 200px; } .fb_feed.fb_article_details.fb_listing_image img { width: 100%; height: auto; } .fb_feed.fb_article_details.fb_listing_title { overflow: hidden; text-overflow: ellipsis; white-space: nowrap; height: 29px; line-height: 29px; float: left;
```
