If you're looking for a well-rounded tool to edit RAW or JPEG files, Photoshop CC is definitely worth a look. As before, it comes highly upgradable thanks to the subscription model, you can find the full version on the Adobe website or the Mac App Store. This is a very good news for AMD users. I tested the latest version of Adobe Photoshop CC on both my MacBook Air and iMac, using an Intel-based processor, and found the tool to work flawlessly. It does run a bit faster on the Mac, but you still shouldn't have any trouble handling large projects within the expected timeframe. Don't forget to turn on the Accessibility features to give those who are blind and hard of hearing a better experience. Has Adobe added a couple of tweaks to the UI to improve the Mac version? Maybe. I honestly don't know as I spent the majority of my time looking for the "Hide All Adjustments" option and couldn't find it. I'm super happy with Adobe Creative Cloud. It has improved so many aspects of working with photography, and nothing if not Apple is consistently improving the tools available for photographers. I did the same thing with Elements, and again, the improvements have been huge, even if the one area that still hurts is the RAW converter. At the very moment I'm reviewing this new version of Photoshop CC, no one in the Apple ecosystem is as relevant as Apple itself is in terms of photography software. It is very interesting that Adobe seems to be copying the Project Rushmore updates to the Foundry apps. There has been an overhauled high ISO handling (and noise reduction)

for Camera Raw, and a little tweak to the WB sliders for more flexibility for dealing with the nuances of gray and the surfacing of images. The inability of the 1.0 version to do some basic smart JPEG creation and do a little clippping without really knowing what was going on is also gone. Overall quality should greatly improve now. Hopefully the RAW capabilities will get more production ready-outs in future iterations, as the current version is extremely limited.
