Historically, the majority of CAD programs were developed for desktop computers running the DOS operating system. However, some CAD programs were available for other operating systems, such as Windows 3.1, 3.11, and 95. CAD users were generally required to have a microcomputer with an internal graphics controller and DOS. With the development of the Windows operating system, most CAD programs for personal computers ran under Windows, and some CAD programs were ported to the Mac OS. The Windows operating system has become the most widely used operating system for personal computers, and since the mid-1990s, CAD programs have been increasingly available for use on both Windows and macOS.

Luteolin has been reported to have various biological activities including radical scavenging activity. However, the bioactive compounds with such a property are not known to have been isolated from the *Anemarrhena* genus. To our knowledge, this study is the first attempt to evaluate the radical-scavenging activity of luteolin from *A. asphodeloides* Bunge, and to identify the radical-scavenging activity of this compound. The effects of luteolin on Fe(2+) and Cu(2+) reduction, hydroxyl radical and nitric oxide (NO) formation were measured using ferrous ions/ascorbate/EDTA-ascorbic acid, CuCl₂/menadione, ONOO(-)/SIN-1, nitrite/SIN-1 and NO/SIN-1, respectively

Combination MRI, electrodiagnostic, and histopathological studies of a patient with a Type I algodystrophy with amyotrophy. A 27-year-old man who presented with insidious and progressive atrophy of the arms and legs, an early involvement of the tongue, and a positive family history of amyotrophic lateral sclerosis (ALS) was diagnosed to have ALS based on the revised El Escorial Criteria. Magnetic resonance imaging (MRI) showed diffuse abnormalities of the spinal cord as well as in the pyramidal tracts. The distribution of the abnormalities corresponded to the neuropathological findings of selective involvement of the posterior column. The combination of electrophysiological and histopathological studies of this patient may provide additional information for establishing the differential diagnosis of ALS.
